## Part: MPM3PM (Modbus)

Three phase four wires energy meter  
10(100)A direct, 35mm DIN Rail  
four module, 4TE, 70mm width  
With RS485 Modbus Protocol RTU  
Manual Revision: 1V12

MECHATRONIC

## Product Picture

removed sealable protection covers

Enclosure in anthracite grey RAL7016

EAN: 798003850837  
ASIN: B073K11PPQ

## Notes:

Customs code HS/TARIC 9028 30 19 00

## 1. Foreword

The MPM3PModBus series meter is produced according to EN50470-3 and fulfils strict quality inspection.

Under normal conditions your product should give you years of benefit and pleasure. In case there is a problem with the energy meter you should contact your dealer immediately. All energy meters are sealed with a special seal. Once this seal is broken there is no possibility to claim for warranty. Therefore NEVER open meter by yourself or break the seal of the energy meter. The warranty time is 12 months after installation, and only valid for construction faults.

## 2. Installation

 CAUTION
<ul style="list-style-type: none"><li>◆ Turn off all the power before working on it.</li><li>◆ Always use a properly rated voltage sensing device to confirm that power is off.</li></ul>
 WARNING
<ul style="list-style-type: none"><li>◆ Installation should be performed by qualified personnel familiar with related procedures and regulations.</li><li>◆ Use insulating tools to install the meter.</li><li>◆ Fuse or thermal cut-off or single-pole circuit breaker can't be fitted on the supply line and not the neutral line.</li><li>◆ The case is sealed, do not broken it</li></ul>

- ◇ We recommend that the connecting wire which is used to connect the meter to the outside circuit should be sized according to local codes and regulations for the capacity of the circuit breaker or over current device used in the circuit.
- ◇ An external switch or a circuit-breaker should be installed on the inlet wire, which will be used as a disconnection device for the meter. And there it is recommended that the switch or circuit-breaker is near the meter so that it is more convenience for the operator. The switch or circuit-breaker should comply with the specifications of the building electrical design and all local regulations.
- ◇ An external fuse or thermal cut-off which will be used as a over-current protection device for the meter must be installed on the supply side wire, and it is recommended that the over-current protection device is near the meter so that it is more convenience for the operator. The over-current protection device should comply with the specifications of the buildings electrical design and all local regulations.
- ◇ This meter can be installed indoor directly, or in a meter box which is waterproof outdoor (IP67), subject to local codes and regulations.
- ◇ To prevent tampering, secure the meter with a padlock or a similar device.
- ◇ The meter has to be installed against a wall which is fire resistant.
- ◇ The meter has to be installed in a good ventilated and dry place.
- ◇ The meter has to be installed in a protection box when placed in dangerous or dusty environment.
- ◇ The meter can be installed and used after being tested and sealed with a letter press printing.
- ◇ The meter can be installed on a 35mm DIN rail.
- ◇ The meter should be installed in an available height so that it is easy to read.
- ◇ When the meter is installed in an area with frequent surges due to e.q. thunderstorms, welding machines, inverters etc, protect the meter with Surge Protection Devices.
- ◇ After finishing installation, the meter must be sealed to prevent tampering.

### 2.1. Connection

Connection of the wires should be done in accordance with the underneath connection diagram.

connection diagram	
L1	L1 phase wire IN,OUT
L2	L2 phase wire IN,OUT
L3	L3 phase wire IN,OUT
N	Neutral wire IN,OUT
32	active pulse output contact "-"
33	active pulse output contact "+"
34	RS485 B "-"
35	RS485 A "+"

**Screw terminals L1,L2,L3,N:**

**maximum Torque is 1.2Nm !**

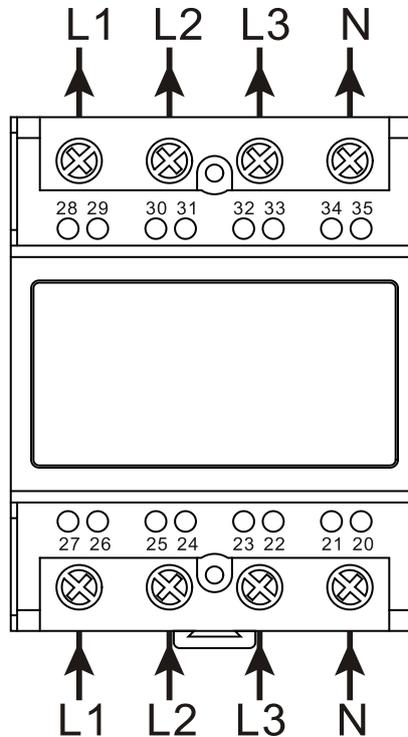

**Wire range 0.8-35(50)mm<sup>2</sup>**

**(cage opening size min. 7.5x8.0mm)**

**Screw terminals 20-35:**

**maximum Torque is 0.2Nm !**

**Wire range 0.12-1.5mm<sup>2</sup>**

### 3. Performance criteria:

Operating humidity	≤ 75%
Storage humidity	≤ 95%
Operating temperature	-10°C - +50°C
Storage temperature	-30°C - +70°C
International standards	
Active energy meters of class 1	IEC62052-11, IEC62053-21
Reactive energy meters of class 2	IEC62053-23
Active energy meters class A, B	EN50470-1, EN50470-3
	Accuracy class
Voltage, LN & LL (Phase 1, 2, 3)	±0.5%
Amps (Phase 1, 2, 3)	±0.5%
PF (Phase 1, 2, 3 & Σ)	±0.2%
Active power (Phase 1, 2, 3 & Σ)	±0.5%
Reactive power (Phase 1, 2, 3 & Σ)	±0.5%
Apparent power (Phase 1, 2, 3 & Σ)	±0.5%
Frequency	±0.2%
Active energy	±1%
Reactive energy	±2%
Protection against penetration of dust and water	IP51

**4. Meter specifications:**

Meter type	MPM3PModbus
Nominal voltage (Un)	230/400V AC (3~)
Operational voltage	161/279 – 300/520V AC (3~)
Insulation capabilities:	
- AC voltage withstand	4KV for 1 minute
- Impulse voltage withstand	6KV – 1.2µS waveform
Basic current (Ib):	
Directly connect	10A
Maximum rated current (Imax)	
Directly connect	100A
Power loss of current path	<1,5W per phase at Maximum rated current
Operational current range	0.4% Ib- Imax
Over current withstand	30Imax for 0.01s
Operational frequency range	50Hz ±10%
Internal power consumption	≤1W / 1VA
Consumption indicator	
PULSE LED	400imp/kWh
SO Output	400imp/kWh
each impulse 1/400[imp/kWh]=0,0025kWh	
Power [W]=2.5Wh*pulse frequency[Hz=1/s]*3600[s/h]	
SO Pulse length 80ms	
! Info: energy flow through the meter, independent on current scale other than 1:1 Eg when using external current transformer.	
Communication indicator symbol	 twinkle on LCD Display
Data communication port	RS485 and far infrared (option)
Data save retention	more than 20 years, power off

**4.1. RS485 communication specifications:**

Bus type	RS485
Protocol	MODBUS RTU with 16 bit CRC
baud rate	1200,2400,4800,9600
Address range	1-255 user settable
Bus Loading	64 meters per bus
Rage	1000m

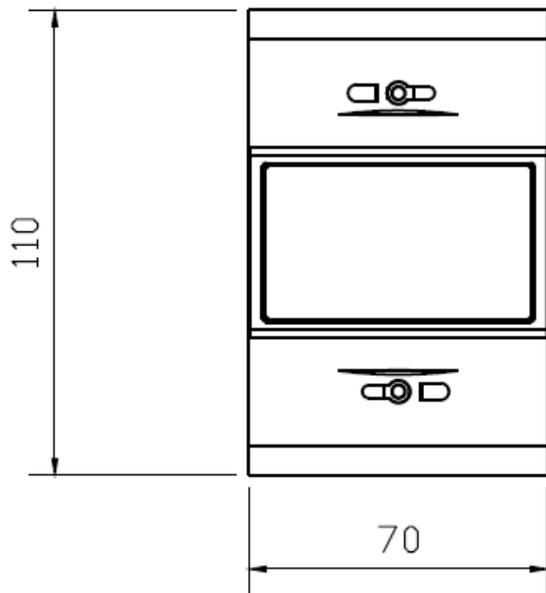

**4.2. Far Infrared communication specifications(optional feature):**

infrared wavelengths	900- 1000nm
baud rate	1200bps
communication distance	5m
communication angle	-15°~+15°
protocol	ModBus RTU with 16 bit CRC

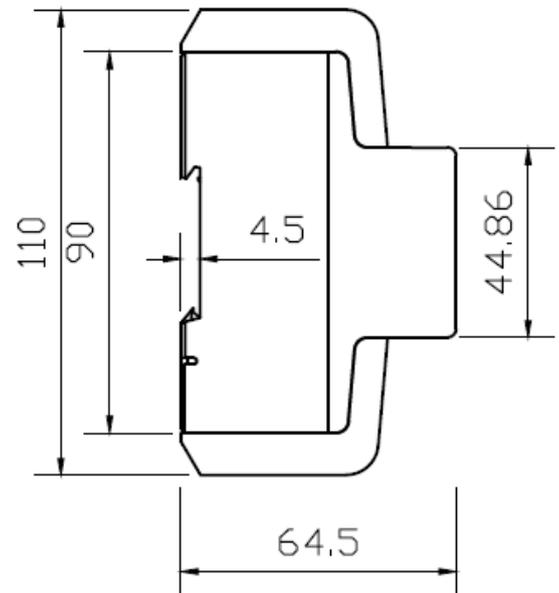

4.3. Basic errors:

Current value	Active class 1.0		Reactive 2.0	
	Power factor COSΦ	Error %	Power factor SINΦ	Error %
$0.05I_b \leq I < 0.1I_b$	1.0	±1.5	1.0	±2.5
$0.1I_b \leq I < I_{max}$	1.0	±1.0	0.5L or 0.8C	±2.0
$0.1I_b \leq I < 0.2I_b$	0.5L or 0.8C	±1.5	1.0	±2.5
$0.2I_b \leq I < I_{max}$	0.5L or 0.8C	±1.0	0.5L or 0.8C	±2.0

5. Dimension

Weight

0.355 kg (net)  
 0.385 kg (packed in carton)

5.1.1. Material

Front panel  
 Cover  
 Base

PC inflammable retarding  
 ABS inflammable retarding  
 ABS inflammable retarding

## 6. Operating

### Consumption indication:

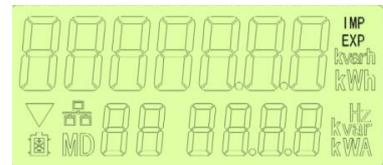

The LED flashes when Power flows through the meter, independent of power flow direction. The more quickly LED flash, the more consumption there is.

#### 6.1. Reading the meter:

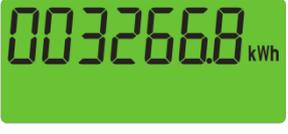

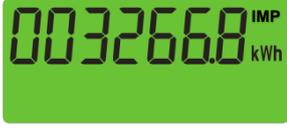

Digits of display: 7 digits for the main display items (6+1 or 5+2)  
 6 digits for the sub display items

**LCD display, the display is as below when power on :**

Content	Display format
The display of full screen	
The constant (Pulse / kWh)	

#### 6.2. Main display items

<b>Active kWh</b> absolute (import total-export total)		<b>import Active total kWh</b>	
<b>Reactive kvarh</b> Absolute (import-export)		<b>export Active total kWh</b>	

Info: Display is set 2 decimal coma: when become greater 99999.99 it will show 100000.0 (switch to one coma) and when become greater 999999.9 it will show 1000000 (no coma).

#### 6.3. Sub display items

Content	Format of display	LCD display
L1 voltage		Display in cycle
L2 voltage		Display in cycle

L3 voltage		Display in cycle
L1 current		Display in cycle
L2 current		Display in cycle
L3 current		Display in cycle
Active power		Display in cycle
Reactive power		Display in cycle
Power factor		Display in cycle
Frequency		Display in cycle

**6.4. Alarming display**

Display of reverse phase		▼ will flash to indicate that the value of current is negative
Display of phase loss		▼ will flash to indicate that the value of display is zero

It is used as recording consumption and can't be reset to zero. The reading accuracy is 1/100 kWh.

### 7. Pulse output S0

The meter is equipped with a pulse output which is fully separated from the inside circuit. That generates pulses in proportion to the measured energy for accuracy testing. Output performance: Voltage range 5-27V DC, Current maximum 20mA.

Info: the pulse rate is based on energy flow through the meter, independent on current scale other than 1:1 (can be modified by ModBus).

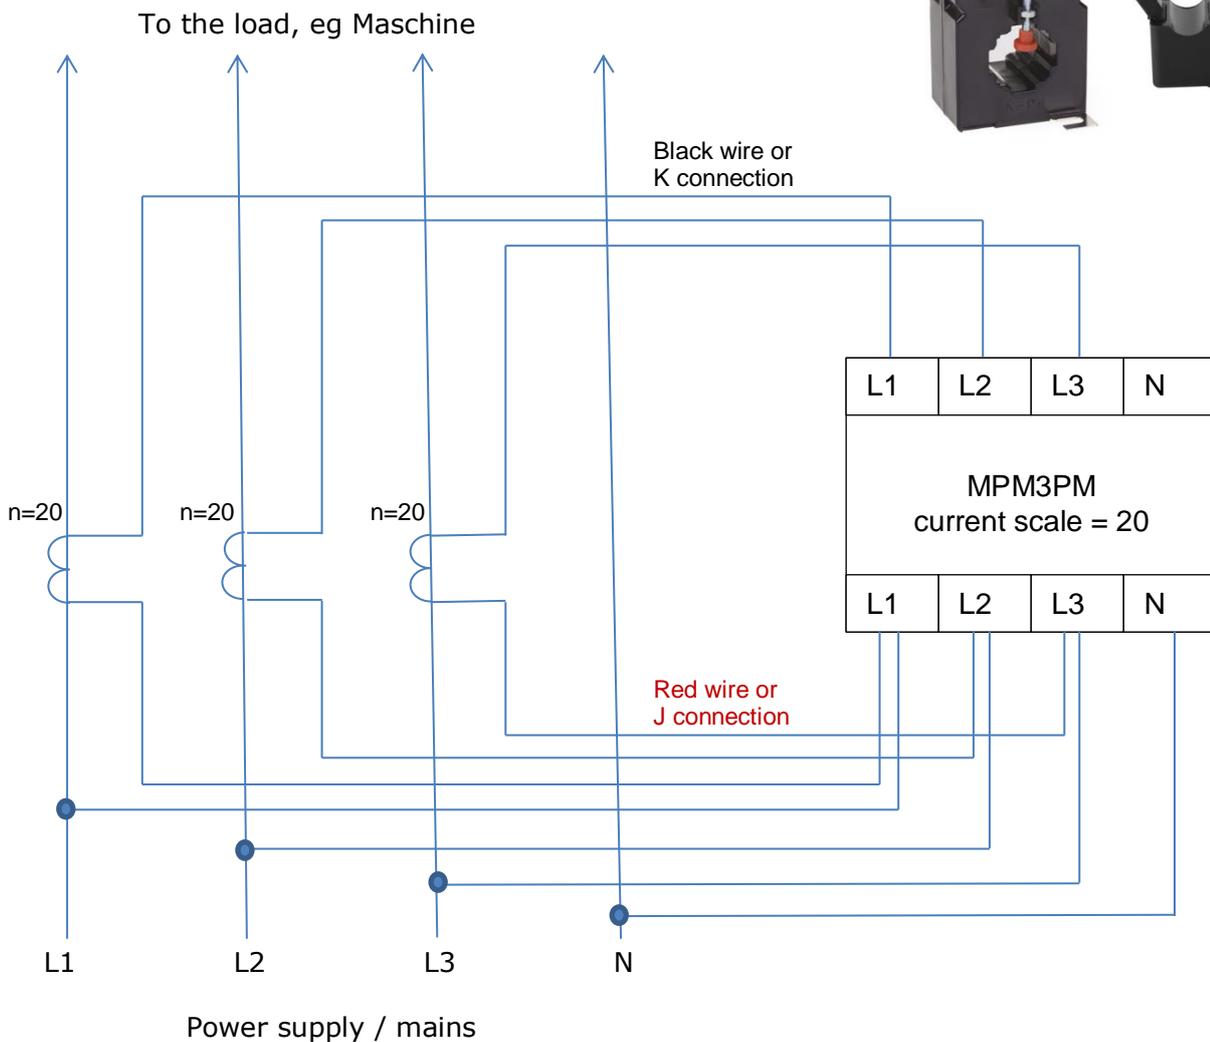

Eg 100A/5A current transformer is used; the current scale is set to 1:20 the pulse rate need to multiplied by 20 on detector side. Meter C400=400imp/kWh→0,0025kWh/imp will be then C20=20imp/kWh→0,05kWh/imp.

### 8. External Current Transformer

For higher power demands means higher currents than the allowed 100Arms or when main energy path can not be switched off for meter installation a typical application is to use current transformers or snap on current measurement transformers.

Example shows for 100A/5A current scale as be used with n=20

Take care of input polarity most shown with an arrow and of J K or red/black wires of current transformer output.

## 9. Technical supports

<b>Problem</b>	<b>Check</b>	<b>Solution</b>
No light for the consumption indicator.	Is there current ?  Maybe there is a fault in the inside circuit.	Only when there has current, this LED will flash.  Please contact your technical supporter to replace this meter.
The register can't run.	Is there a power supply inside the meter?  Is the operating power too low?  Maybe there is a fault in the inside circuit.	Check that the power supply  If the operating power is too low, the spacing interval of the pulses will take some more time, this is why it seems like the meter won't count.  Please contact your technical supporter to replace this meter.
No pulse output.	Is the connecting correct ?  Maybe there is a fault in the inside circuit.	Check correct connecting: Check polarity of Anode and Cathode of S0 output, Voltage range 5-27V DC.  Please contact your technical supporter to replace this meter.
Pulse output rate wrong.	Maybe there is a fault in the inside circuit.	Please contact your technical supporter to replace this meter.

### 9.1. Your technical supporter

**TEL: OEM phone number**

**Email: OEM email address**

**[OEM Website](#)**

## 10. ModBus Communication Protocol

### 10.1. format of byte RS485

1 starting bit „0“	8 data bit Lowest digit first	(1 parity bit) „1“ or „0“	1 stop bit „1“
-----------------------	----------------------------------	------------------------------	-------------------

### 10.2. Frame format

ID, address of device	function code	data field	CRC
-----------------------	---------------	------------	-----

ID, address of device : 1 byte. Value range 0~255,  
 among which 0 is broadcast address.

Function code : 1byte. Please refer to the followed for more information.

Data field : it changes with the different function codes. The max is 252 bytes.  
 The high bytes come first.

CRC : The schooling field of frame, 2 bytes, the lower bytes come first.

### 10.3. function codes

Function code	Operation	Command of broadcast
0x04	Reading the register	Allowed
0x10	Setting several registers	Allowed

### 10.4. Read command of register value (04H)

Request of master device:

ID, address of device		1 byte	01H~F7H
function code		1byte	04H
starting register address to be read	reg high	1 byte	xx
	reg low	1 byte	xx
numbers of registers to read		2 byte	N [low, high]
CRC		2 bytes	CRC_Lo, CRC_Hi

Return:

ID, address of device	1 byte	01H~F7H
function code	1 byte	04H
number of data, following	1 byte	N
content of data	N byte	
CRC	2 bytes	CRC_Lo, CRC_Hi

– 10.5. *command to set the value of several registers (10H)*

The request from master device :

ID, address of device	1 byte	00H~FFH	
function code	1 byte	10H	
starting register	reg high	1 byte	xx
address to be written	reg low	1 byte	xx
number of registers to be written	2 bytes	N	
number of following data bytes	1 byte	2×N	
Register value	2×N	xxxx	
CRC	2 bytes	CRC_Lo, CRC_Hi	

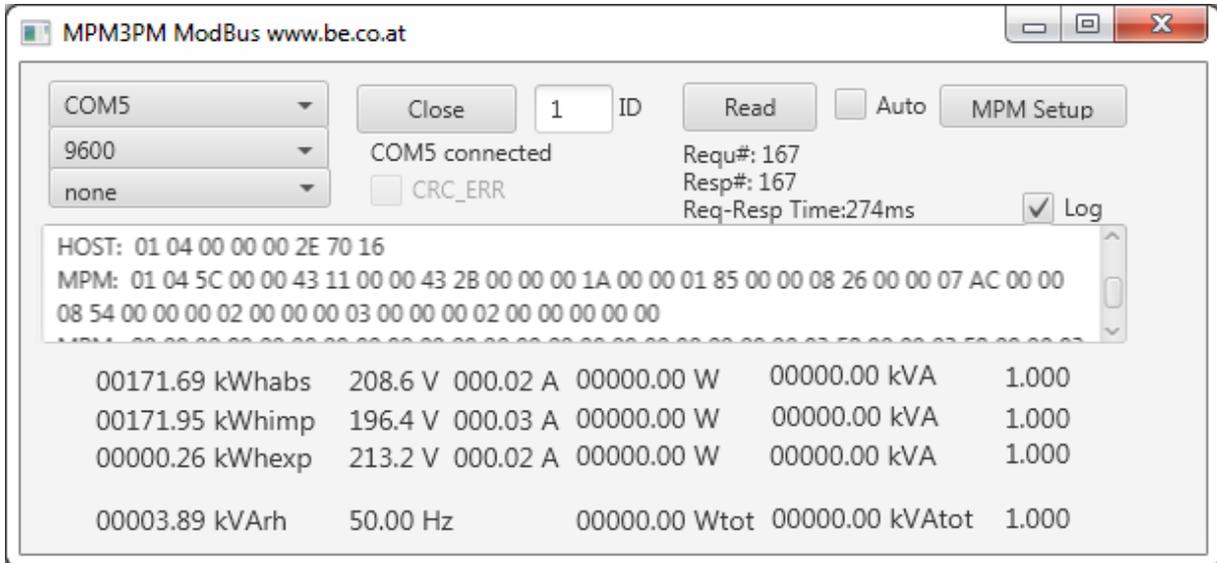

Return :

ID, address of device	1 byte	00H~F7H	
function code	1 byte	10H	
starting register	reg high	1 byte	xx
address to be written	reg low	1 byte	xx
number of data bytes, which where written and confirmed	1 byte	2×N	
CRC	2 bytes	CRC_Lo, CRC_Hi	

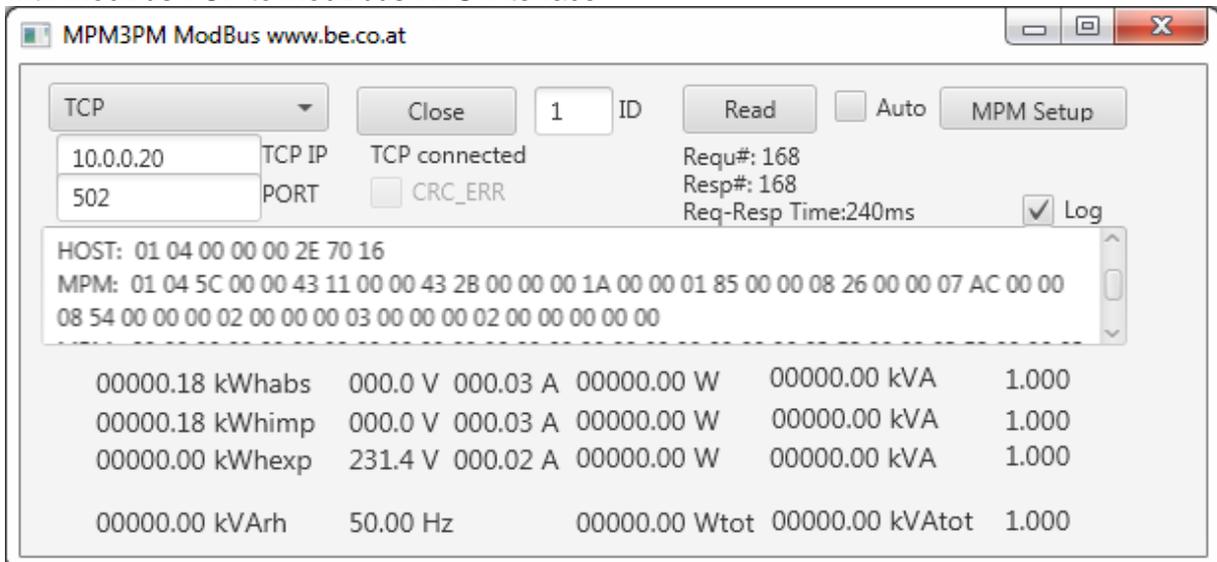

### 11.Free Software for Winows, Linux and Apple

[www.qrck.info/modbus.jar](http://www.qrck.info/modbus.jar)

requires Java Runtime

Can connect with any serial com port with RS485 or with USB-RS485 interface (with virtual com port driver like FTDI...) or with ModBus TCP to ModBbus RTU Interface

**Bernecker Engineering**

email: mpm@be.co.at

---

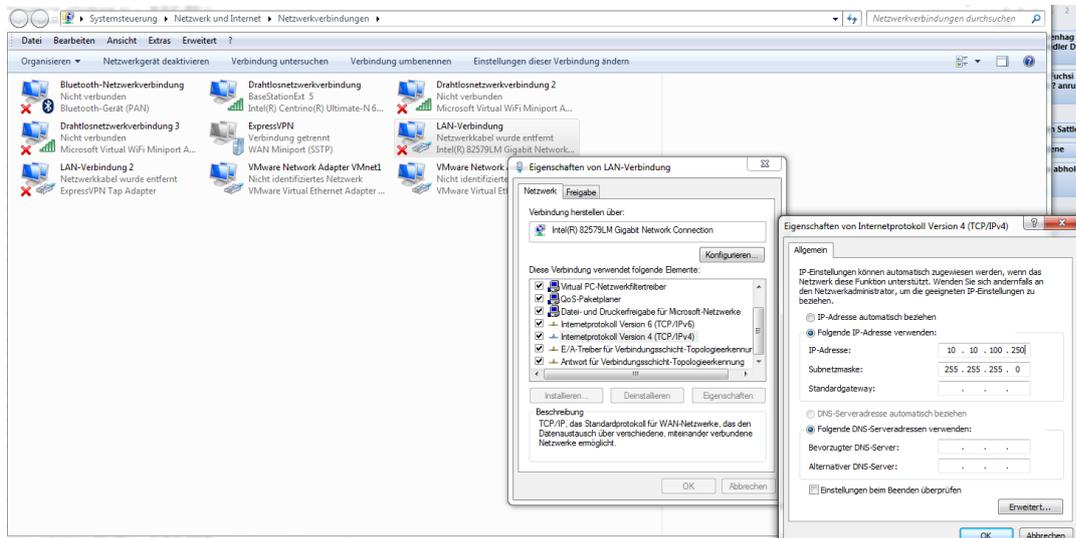

## 12. Setup ModBus TCP to ModBus RTU converters

Short instruction for use of these:

### 12.1. HF2211

First connect Ethernet socket from HF2211 to Laptop with short patch cable.  
In case you have no DHCP client enabled (means the IP address is given from the access point) on your computer you can assign a static address IP in same network mask the HF2211 is:

Then open the browser and enter <http://10.10.100.254>  
Default password is admin / admin

**SYSTEM SETTINGS:**

**System Settings**  
Change the device system settings

**Authentication**

User Name: admin  
Password: \*\*\*\*\*

**Basic Settings**

Host Name: Eport-HF2211

**WiFi Settings**

WiFi Mode: STA  
Channel: AUTO  
STA SSID: BaseStationExt  
STA KEY: \*\*\*\*\*  
Scan  
WiFi Roaming: OFF

**WAN Settings**

DHCP: OFF  
WAN IP: 10.0.0.40  
Subnet Mask: 255.255.255.0  
Gateway: 10.0.0.138  
DNS: 10.0.0.138

**LAN Settings**

LAN IP: 10.10.100.254  
Mask: 255.255.255.0  
DHCP Server: ON

**Telnet Settings**

Enable: OFF

**Web Settings**

Enable: ON  
Web Port: 80

**NTP Settings**

Enable: OFF

Submit Reset

build:1808171357333996

You can connect either to LAN (Ethernet socket) or WLAN (WiFi)  
WLAN mode: WiFi Mode STA, channel AUTO, then click on Scan and select the desired Access Point and enter the STA password (WPA Key, WPA2....)

WAN IP is recommended to assign a static IP, this address need to be in the WiFi IP range and not collision with other devices. Best is to use a high IP address.  
eg the DHCP server of the access point ranges from 10.0.0.1 to 10.0.0.50 then best assign on the top range like 10.0.0.40.

In this example the future ModBus TCP access is at 10.0.0.40:502

### SERIAL PORT SETTINGS:

#### Serial Port Settings

change the device serial port settings

<b>Basic Settings</b>	
Baud Rate	9600
Data Bit	8
Stop Bit	1
Parity	None
<b>Buffer Settings</b>	
Buffer Size	1024
Gap Time	50
<b>Flow Control Settings</b>	
Flow Control	Disable
<b>CLI Settings</b>	
CLI	Disable
<b>Protocol Settings</b>	
Protocol	Modbus

build1808171357333996  
Recommend using Google Chrome, Mozilla Firefox, Internet Explorer 11+

### COMMUNICATION SETTINGS:

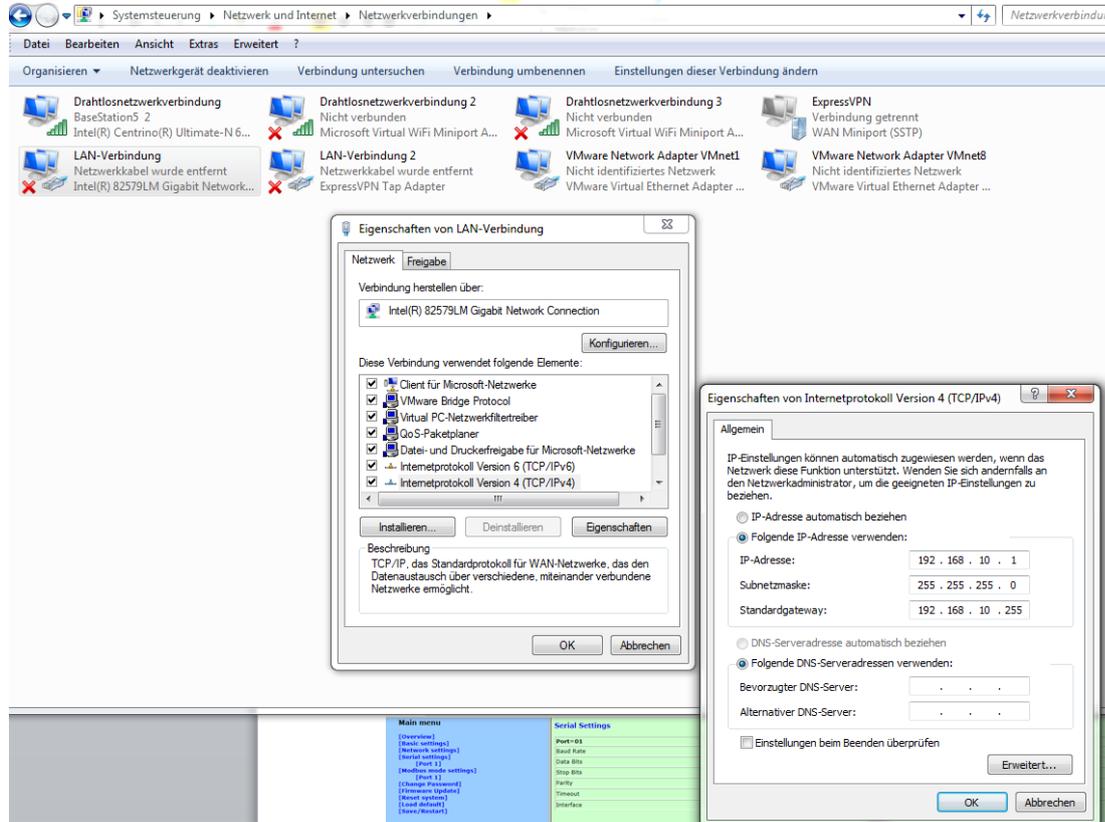

#### Communication Settings

change the device socket settings

<b>Basic Settings</b>	
Name	netp
Buffer Size	1024
Keep Alive(s)	60
Timeout(s)	0
<b>Protocol Settings</b>	
Protocol	Top Server
Local Port	502
Max Accept	1
<b>Security Settings</b>	
Security	Disable
<b>Route Settings</b>	
Route	Uart

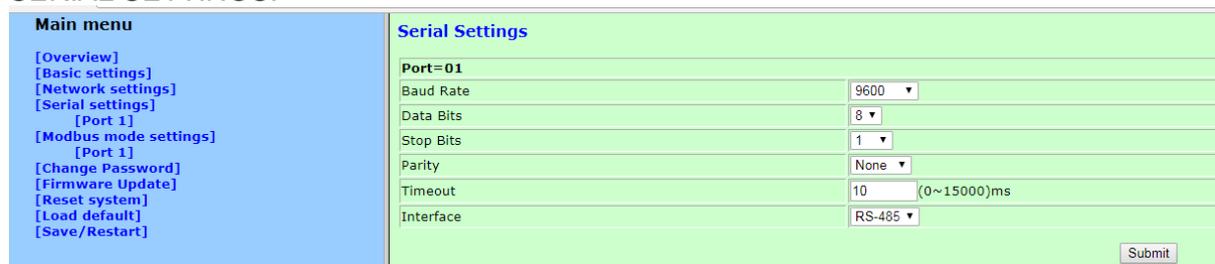

### 12.1. Volison ADM-5850G

Set the PC to a static IP address for Ethernet connection. Connect the Volison to the PC using a simple ethernet patch cable.

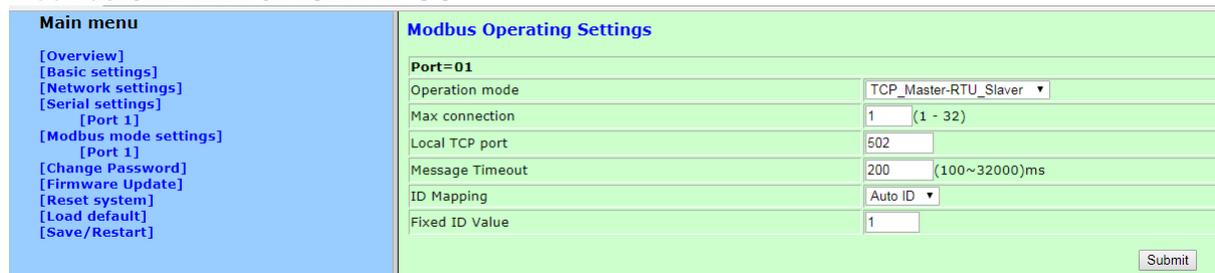

Start the browser <http://192.168.10.245>

#### SERIAL SETTINGS:

#### ModBus OPERATION SETTINGS

Auto ID → request ID is response ID  
 Fixed ID → mapped eg Request ID 03 becomes ID 01

NETWORK SETTINGS:

<b>Main menu</b> [Overview] [Basic settings] [Network settings] [Serial settings] [Port 1] [Modbus mode settings] [Port 1] [Change Password] [Firmware Update] [Reset system] [Load default] [Save/Restart]	<b>Network Settings</b> MAC address <input type="text" value="00:27:FD:EA:01:E4"/> IP address <input type="text" value="10.0.0.11"/> Netmask <input type="text" value="255.255.255.0"/> Gateway <input type="text" value="10.0.0.138"/> IP configuration <input type="text" value="DHCP"/> DNS server <input type="text" value="0.0.0.0"/> <input type="button" value="Submit"/>
---	---

Setup a static IP matching the application network or in case of using DHCP set up the router or DHCP server to assign a static IP.

In this case we use 10.0.0.11 (Host Name: <http://Volison-GW>)

For ModBus TCP the access is 10.0.0.11:502

— Now we can place the Volison device into the application network.

### 13. Loxone Server Configuration

When you use the ModBus RTU interface from Loxone, please read this first:

<https://www.loxone.com/dede/kb/kommunikation-mit-modbus-rtu/>

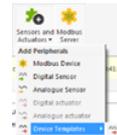

When you use standard ModBus TCP RTU converter, like listed in previous chapter please read this first:

<https://www.loxone.com/dede/kb/kommunikation-mit-modbus-tcp/>

#### 13.1. XML code for Loxone

Download [www.qrck.info/MB\\_MPM3PM.xml](http://www.qrck.info/MB_MPM3PM.xml) and copy the file into  
 C:\ProgramData\Loxone\Loxone Config 10.2.3.26\Templates\Comm

Restart the Loxone Config Software and find under  
 Modbus Server → Sensors and Actuators → Device Templates → MPM3PM

<b>Current Scale ratio</b>	0x0044	1	2	Unsigned 16	R & W	<b>(01 default)</b> 1A:1A, no external current transformer Example 100A:5A, value to be set 20

## 14.2. Modify the parameters of meters

### 14.2.1. modify the baud rate, parity setting

Sending data: 01(ID) 10 00 2E 00 01 02 **02 20** (baud rate status word) CRC0,1

Example to set 9600 baud, parity even:

Baud rate register 0x002E = 0x00 20

```
Raw Data
[RTU]>Tx > 07:12:46:479 : 01 10 00 2E 00 01 02 00 20 A1 C6
[RTU]>Rx > 07:12:46:604 : 01 10 00 2E 00 01 61 C0
Sys > 07:12:46:604 : values written correctly.
```

Possible baud rate settings:

baud	parity		
	even	odd	none
1200	0x0004	0x0104	0x0204
2400	0x0008	0x0108	0x0208
4800	0x0010	0x0110	0x0210
9600	0x0020	0x0120	<b>0x0220</b>

### 14.2.2. modify the number of decimal digits

Sending data : 01(ID) 10 00 32 00 01 02 **00 01** (1 decimal digit for kWh) +CRC0,1

Returning data : 01(ID) 10 00 32 00 01 A0(CRC0) 06(CRC1)

Sending data : 01(ID)10 00 32 00 01 02 **00 02** (2 decimal digits for kWh) +CRC0,1

Returning data : 01(ID) 10 00 32 00 01 A0(CRC0) 06(CRC1)

The number of decimal digits 01: 999999.9

The number of decimal digits 02: 99999.99

### 14.2.3. modify the item displayed in cycle

For example, you need the meter to display the voltage of phase L1/L2/L3 , current of phase L1/L2/L3, active power, reactive power, power factor, frequency, baud rate, ID ,high digit of serial number, low digit of serial number. 14 items = 0x0E

The first step: modify the number of screen displayed in cycle :

Sending data : 01(ID) 10 00 30 00 01 02 **00 0E** 22(CRC0) 64(CRC1)

Returning data : 01(ID) 10 00 30 00 01 01(CRC0) C6(CRC1)

The second step: modify the item displayed in recycle, struct data :

IT IS NECESSARY TO SEND a multiple register write with 14 entry values!

Sending data :

01(ID) 10 00 35 00 0E 1C 00 10 00 20 00 30 00 40 00 50 00 60 00 70  
 00 80 00 90 00 A0 00 B0 00 C0 00 D0 00 E0 89(CRC0) 34(CRC1)

Returning data:01(ID) 10 00 35 00 0E 51(CRC0) C3(CRC1)

14.2.4. To read the data module

Sending data : 00(ID) 04 AA AA 00 BB CRC0 CRC1

AA AA The starting add of register

BB The number of registers read by you

For example, reading the voltage of phase L1, L2, L3 and current of phase L1, L2, L3. Read the Voltage of L1, I2, I3.

Sending data : 00(ID) 04 00 08 00 08 CRC0 CRC1

**15. ABB23 compatible registers:**

These registers are shadow registers, to be compatible to ABB23 meters

*15.1. Data format*

Register Number 2 and Unsigned 32 means 0 digit is 0x0000 0000 and the highest possible value is 0xffff ffff

Example Register 0x5B00 Res 0.1 unit V, voltage 237,3V is 2373digits and is 0x0000 0945

Register Number 2 and Signed 32 means 0 digit is 0x0000 0000 and the highest possible value is 0x7fff ffff and minus 1 is 0xffff ffff, lowest negative value is 0x8000 0000

Example Register 0x5B14 Res 0.01W unit W, 1234,67W is 123467digits and is 0x0001 e24b,

Negative power -136,82W is -13682digits and is 0xffff ca8e

15.2. Register BLOCK 1

Function	Register Address	Register Number	Unit	Format	Access (R/W)	Note
<b>Active import kWh</b>	0x5000	4	0,01 kWh	Unsigned 64	R	
<b>Active export kWh</b>	0x5004	4	0,01 kWh	Unsigned 64	R	
<b>Active net kWh</b>	0x5008	4	0,01 kWh	Signed 64	R	=Active import kWh - Active export kWh
<b>Reactive inductive kvarh</b>	0x500C	4	0,01 kvarh	Unsigned 64	R	Independ import-export
<b>Reactive capacitive kvarh</b>	0x5010	4	0,01 kvarh	Unsigned 64	R	Independ import-export
<b>Reactive total kvarh</b>	0x5014	4	0,01 kvarh	Unsigned 64	R	Inductive +capacitive
<b>Apparent import kVAh</b>	0x5018	4	0,01 kVAh	Unsigned 64	R	Not implemented, readout 0xffff ffff ffff ffff
<b>Apparent export kVAh</b>	0x501C	4	0,01 kVAh	Unsigned 64	R	Not implemented, readout 0xffff ffff ffff ffff
<b>Apparent net kVAh</b>	0x5020	4	0,01 kVAh	Signed 64	R	Not implemented, readout 0xffff ffff ffff ffff

15.3. Register BLOCK 2

Function	Register Address	Register Number	Unit	Format	Access (R/W)	Note
Active net L1	0x5478	4	0,01 kWh	Signed 32	R	Not implemented, readout 0xffff ffff ffff ffff
Active net L2	0x547C	4	0,01 kWh	Signed 32	R	Not implemented, readout 0xffff ffff ffff ffff
Active net L3	0x5480	4	0,01 kWh	Signed 32	R	Not implemented, readout 0xffff ffff ffff ffff

15.4. Register BLOCK 3

Function	Register Address	Register Number	Unit	Format	Access (R/W)	Note
Voltage L1-N	0x5B00	2	0,1 V	Unsigned 32	R	
Voltage L2-N	0x5B02	2	0,1 V	Unsigned 32	R	
Voltage L3-N	0x5B04	2	0,1 V	Unsigned 32	R	
Voltage L1-L2	0x5B06	2	0,1 V	Unsigned 32	R	$=\sqrt{((L1-N)^2+(L2-N)^2+(L1-N)*(L2-N))}$
Voltage L3-L2	0x5B08	2	0,1 V	Unsigned 32	R	$=\sqrt{((L2-N)^2+(L3-N)^2+(L2-N)*(L3-N))}$
Voltage L1-L3	0x5B0A	2	0,1 V	Unsigned 32	R	$=\sqrt{((L1-N)^2+(L3-N)^2+(L1-N)*(L3-N))}$

Function	Register Address	Register Number	Unit	Format	Access (R/W)	Note
<b>Current L1</b>	0x5B0C	2	0,01 A	Unsigned 32	R	
<b>Current L2</b>	0x5B0E	2	0,01 A	Unsigned 32	R	
<b>Current L3</b>	0x5B10	2	0,01 A	Unsigned 32	R	
<b>Current N</b>	0x5B12	2	0,01 A	Unsigned 32	R	Not implemented, readout 0xffff or 0x0000, to be calculated extern
<b>Active Power Total</b>	0x5B14	2	0,01 W	Signed 32	R	
<b>Active Power L1</b>	0x5B16	2	0,01 W	Signed 32	R	
<b>Active Power L2</b>	0x5B18	2	0,01 W	Signed 32	R	
<b>Active Power L3</b>	0x5B1A	2	0,01 W	Signed 32	R	
<b>Reactive power Total</b>	0x5B1C	2	0,01 var	Signed 32	R	
<b>Reactive power L1</b>	0x5B1E	2	0,01 var	Signed 32	R	
<b>Reactive power L2</b>	0x5B20	2	0,01 var	Signed 32	R	
<b>Reactive power L3</b>	0x5B22	2	0,01 var	Signed 32	R	

Function	Register Address	Register Number	Unit	Format	Access (R/W)	Note
Apparent power Total	0x5B24	2	0,01 VA	Signed 32	R	
Apparent power L1	0x5B26	2	0,01 VA	Signed 32	R	
Apparent power L2	0x5B28	2	0,01 VA	Signed 32	R	
Apparent power L3	0x5B2A	2	0,01 VA	Signed 32	R	
Frequency	0x5B2C	2	0,01 Hz	Unsigned 32	R	
Unused registers	0x5B2D-0x5B39	1				Not implemented, readout 0xffff or 0x0000
Power factor Total	0x5B3A	1	0,001	Unsigned 16	R	0.000-1.000
Power factor L1	0x5B3B	1	0,001	Unsigned 16	R	0.000-1.000
Power factor L2	0x5B3C	1	0,001	Unsigned 16	R	0.000-1.000

**16. CE approval**

## The risk assessment

We

**Bernecker Engineering**

at

**Fichtenstrasse 16  
4611 Buchkirchen  
Austria / Europe**

ensure and declare that the apparatus:

**MPM3PM** series

With the measurement range

**3x230/400VAC, 50 Hz, 10(100)A 400imp/kWh**

Complies with all applicable directives and harmonized standards or  
normative documents, and therefore all applicable risks that are imposed  
by the instrument are covered and will be labelled with logo.

## Prüfbericht

### Elektromagnetische Verträglichkeit

Report # EMVC 2017-08-15

**Projekt: 3 Phasen Stromzähler**

**Typ: MPM3PM**

**Hersteller: Bernecker Engineering**

## 1 Prüfobjekt

### 1.1 Prüflingsidentifikation

Auftraggeber: Fa. Bernecker Engineering  
Fichtenstrasse 16  
4611 Buchkirchen  
Email:  
[office@be.co.at](mailto:office@be.co.at)

Kontaktperson: Hr. Günther Bernecker  
Email:  
[g.bernecker@be.co.at](mailto:g.bernecker@be.co.at)  
Phone.: +43 676 40 55  
144

Prüfobjekt: 3 Phasen Stromzähler mit RS485 Ausgang

ohne PE Typ: MPM3PM

Seriennummer: 1003

Hersteller: Fa. Bernecker Engineering

Betriebsbedingungen: Normalbetrieb, RS485 sendet dauernd Prüf-  
grundlage:

Generic: Emission EN61000-6-3:2007 + A1:2011

Ort der Messung: EMV - Labor EMV Consulting A-4872 Neukirchen

Datum der Messung: 25.7.2017

Bemerkungen: Die Messungen wurden in Anwesenheit von Hrn. Bernecker durchgeführt.

Ergebnis: Die Anforderungen der oben angeführten Fachgrundnorm werden erfüllt.

Umgebungsbedingungen: T = 22°C RH = 55.0%

Durchführung der Messung: Dipl. Ing. Ottinger Willy

## 1.2 Anlagenkonfiguration:

LL = Leitungslänge

H/SF = Höchste Systemfrequenz

**EUT:** 3 Phasen Stromzähler  
**Typ:** MPM3PM  
**SNR:** 1003  
**H/W:** V1.0  
**S/W:** V1.06  
**H/SF:** > 108MHz (141 MHz)  
**Versorgung:** Einzel Diode in jeder Phase  
**Leitungen:** 3x 400 V ac Zu- und Ableitung beliebig  
**1x RS485** LL < 30m keine Telekommunikationsnetz

#### 1.4 Durchgeführte Modifikationen

- keine

## 2 Zusammenfassung der Prüfungen :

### **Übereinstimmung mit der Störemissionsanforderung EN61000-6-3:2007**

<b>2.1 Störspannungsmessung 24Vdc (50 Ohm / 50 µH LISN)</b> 150 kHz - 30 MHz	<b>EN55022 KL B</b> erfüllt <input checked="" type="checkbox"/>	nicht erfüllt <input type="checkbox"/>
<b>2.2 Elektromagnetische Feldstärke</b> Messentfernung 3m , Umrechnung auf 10 m mittels rückführbaren Hallenfaktors	<b>EN55022 KI B,</b>	
10m: 30 - 230 MHz 30 dB µV/m, 230 - 1000 MHz 37 dB µV/m	erfüllt <input checked="" type="checkbox"/>	nicht erfüllt
<input type="checkbox"/> 3m: 1000 - 3000 MHz 50 dB µV/m (AVG), 70 dB µV/m (PEAK),	erfüllt <input checked="" type="checkbox"/>	nicht erfüllt
<input type="checkbox"/> 3m: 3000 - 6000 MHz 54 dB µV/m (AVG), 74 dB µV/m (PEAK),	erfüllt <input checked="" type="checkbox"/>	nicht erfüllt
<input type="checkbox"/>		

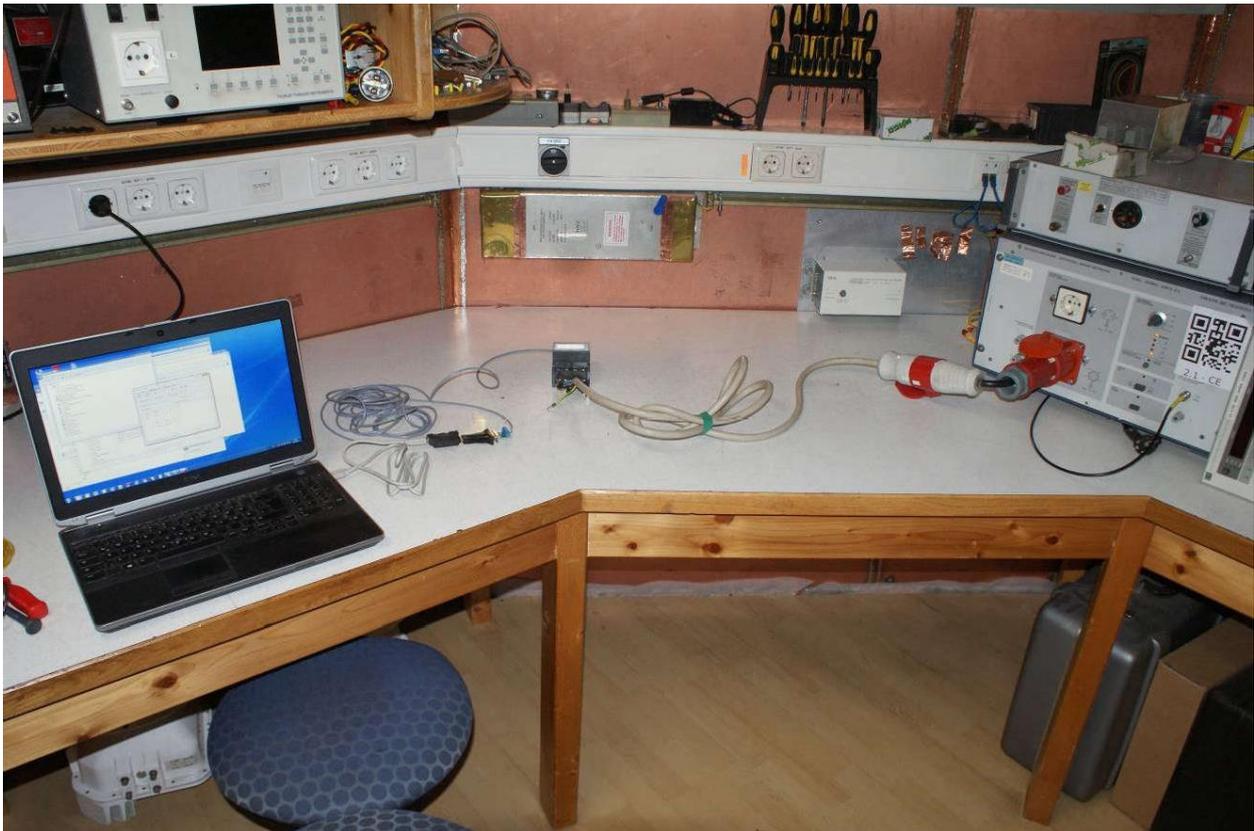

### 3 Zusammenfassung der Ergebnisse:

#### 3.1 Leitungsgebundene Störungen:

Die Average Messwerte sind grün (Limit ist untere Grenzwertlinie), die Peak Messwerte blau und die Quasi Peak Werte mit blauen Sternchen (Limit ist obere Grenzwertlinie) im Diagramm dargestellt.

Die Grenzwerte für Quasipeak und Average gemäß EN55022 Klasse B werden eingehalten. Prüflingsaufbau: Störspannung 3x400VAC Versorgung  
Bild: CE

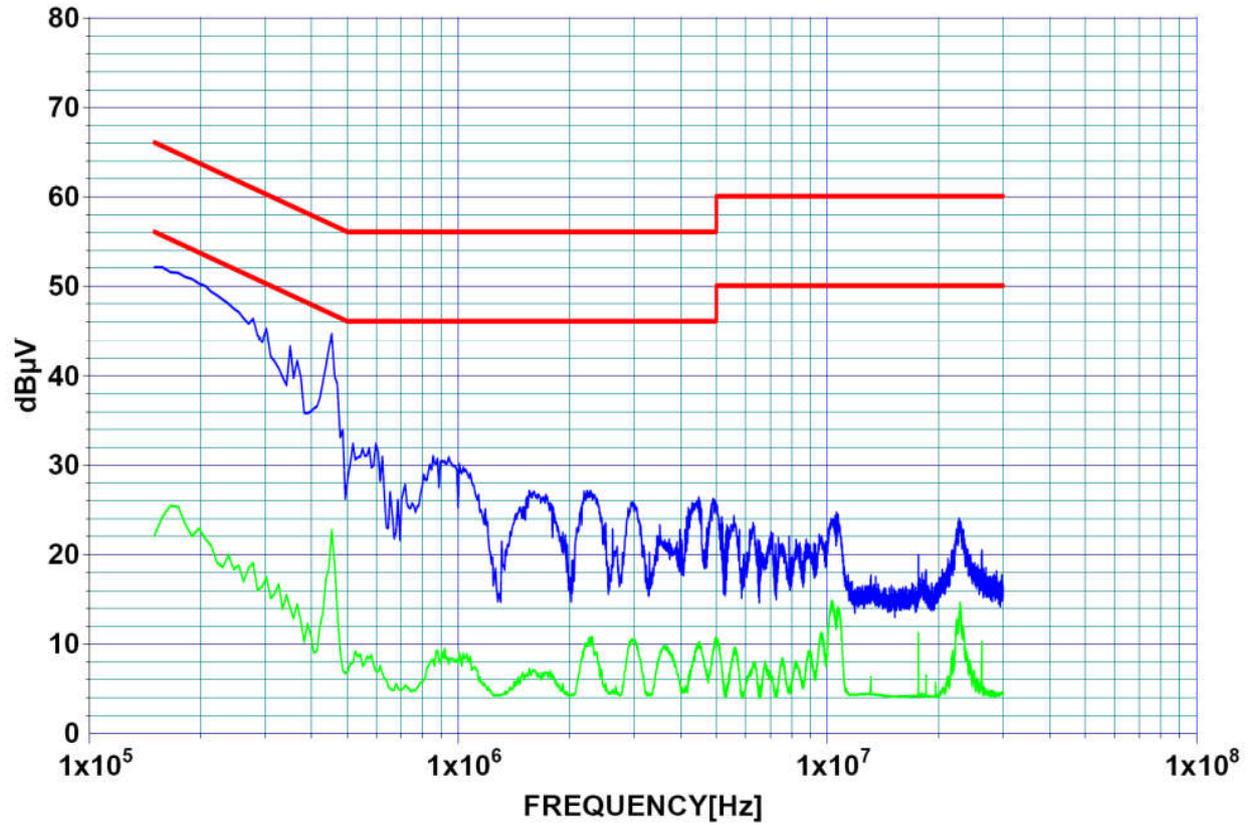

CE1 Störspannung 400Vdc CEL1

Limit EN55022 Klasse B

siehe Bild:

CE Betriebsmode: Normalbetrieb, RS485 in Betrieb, Messung Neutraleiter

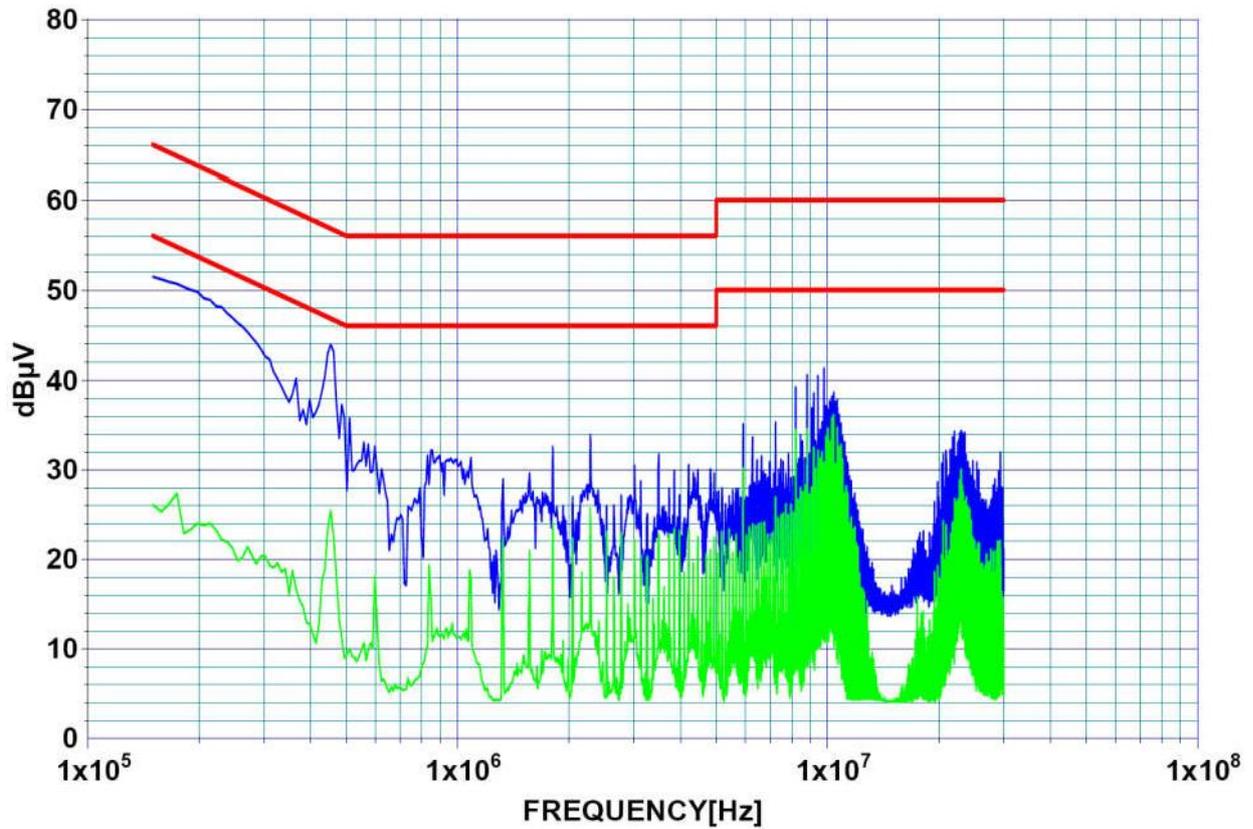

CE2 Störspannung 400Vac CEL2

Limit EN55022 Klasse B

siehe Bild:

CE Betriebsmode: Normalbetrieb, RS485 in Betrieb, Messung L1

Die Anforderungen der EN61000-6-3 werden erfüllt.

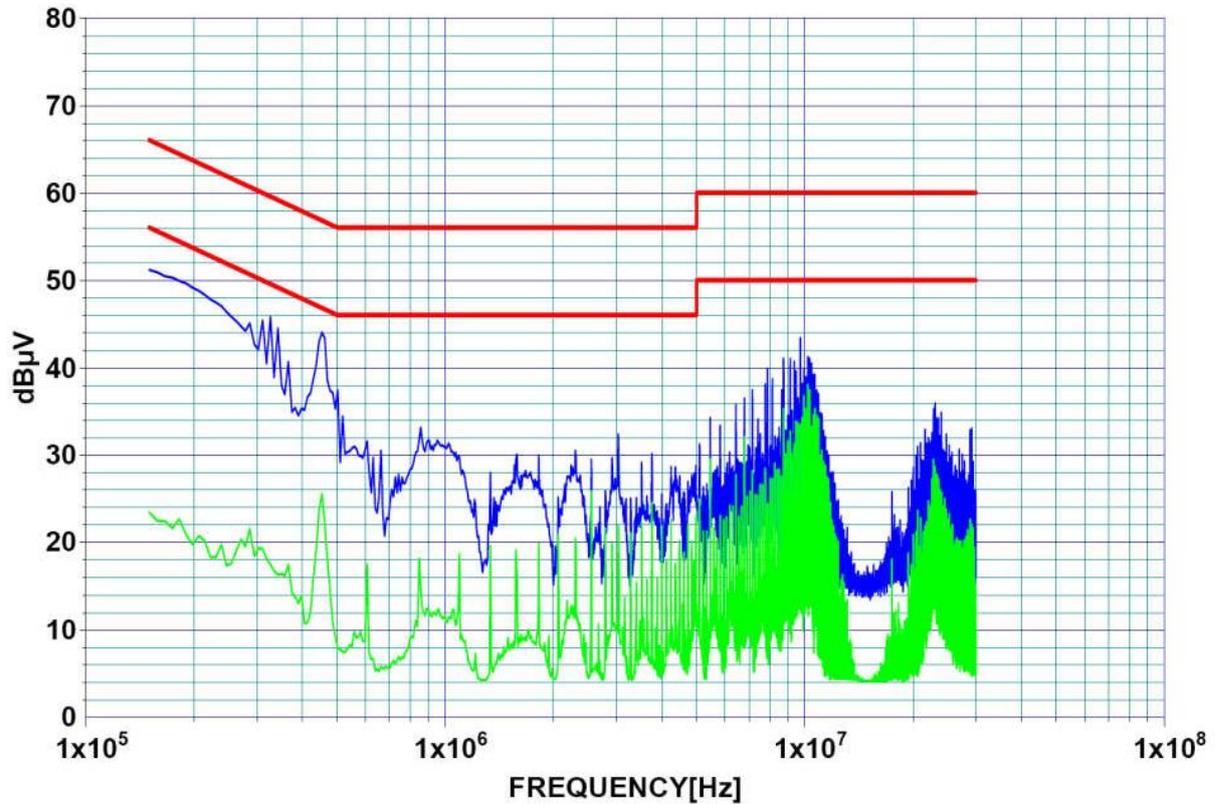

CE3 Störspannung 400Vac CEL3

Limit EN55022 Klasse B

siehe Bild:

CE Betriebsmode: Normalbetrieb, RS485 in Betrieb, Messung L2

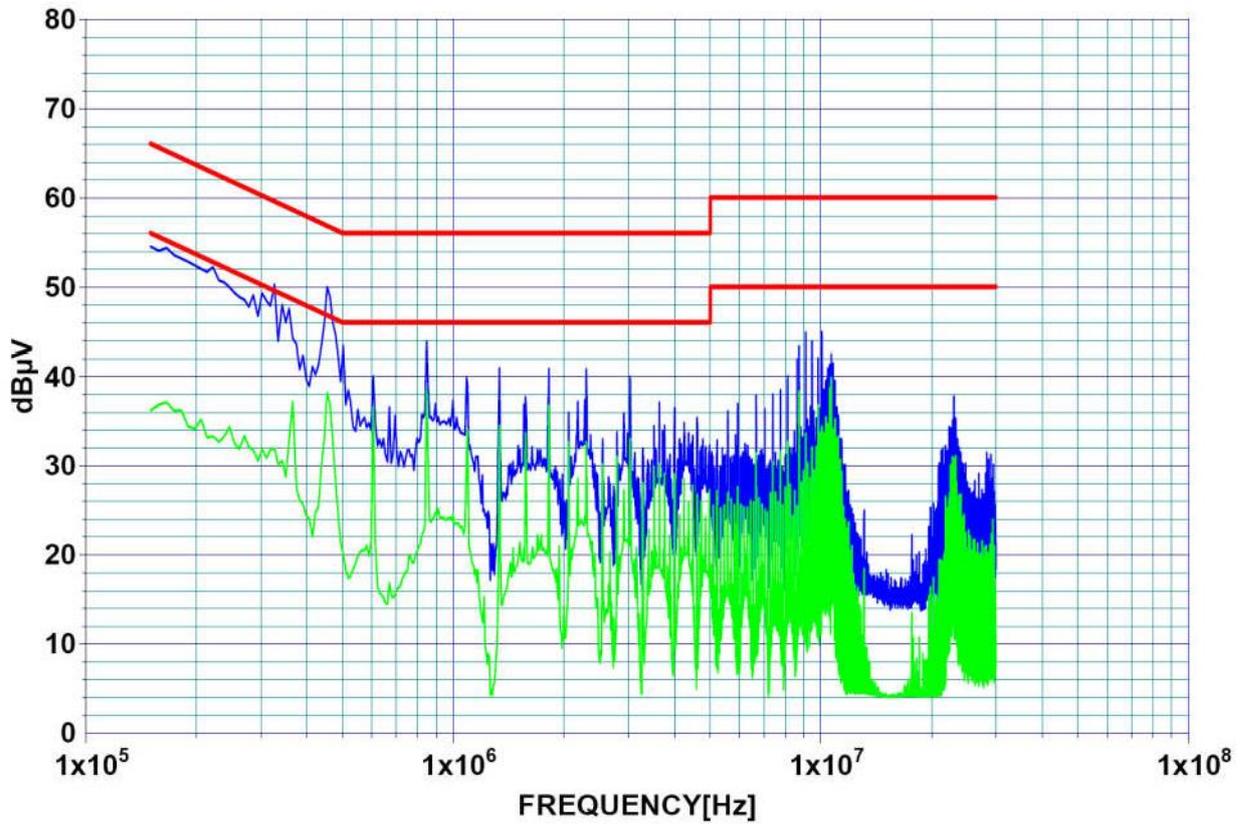

CE3 Störspannung 400Vac CEN

Limit EN55022 Klasse B

siehe Bild:

CE Betriebsmode: Normalbetrieb, RS485 in Betrieb, Messung L3

### 3.2 Abgestrahlte Störungen:

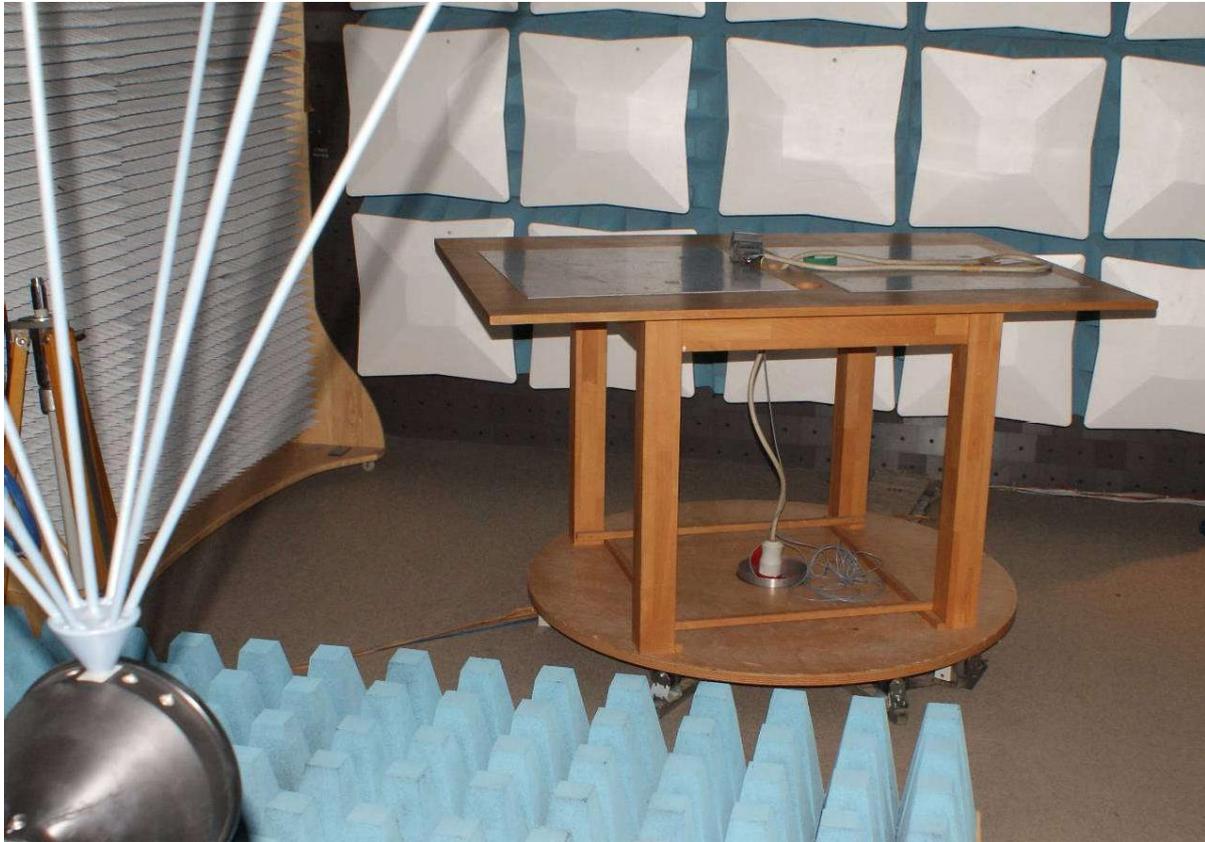

Es wurde je eine Messung mit horizontaler und vertikaler Polarisierung durchgeführt. Der gesamte Messbereich von 30 MHz bis 6000 MHz wurde in 3 Teilbereiche (30 – 200 MHz, 200 - 1000 MHz und 1000 – 6000MHz) unterteilt.

Die Messentfernung betrug 3 m.

Die Grenzwerte für Quasipeak gem. EN55022 Klasse B werden ein-

gehalten. Prüflingsaufbau Emissionsmessungen:
